PURPOSE: To satisfy the portability and a satisfactory display by forming a backlight device attached in the rear of a liquid crystal display device to a detachable structure.

CONSTITUTION: At the time of carrying and at the time of containing, a display part 2 is closed and used as a cover of a keyboard; and formed to a compact shape which can be carried and contained easily. At the time of use, the display part 2 is raised up and the angle can be adjusted freely. Also, in the rear of a liquid crystal display device 5, a reflecting mirror 8 for reflecting a light beam which is made incident on from the front of the device 5 and giving a contrast to the display is attached to a display part case 6 through a rotary supporting part 9, and can be separated from the case 6 in a position of the supporting part 9. According to this constitution, the device being convenient for carrying and satisfactory in its display is obtained.
